

Elite IQ Cynosure

Our dermatology clinic has the most modern, safe, innovative and effective Alexandrite Laser of the latest generation (8th) for the most painless and effective hair removal.

Elite IQ Cynosure is the most complete hair removal system and is designed for all skin types.

Eliminates unnecessary hair growth with unparalleled efficiency and comfort and this is due to its revolutionary technology to combine two optimal wavelengths in one system: the 755-nm Alexandrite laser and the 1064nm Nd: YAG laser.

The 755-nm wavelength in combination with a suitable choice of pulse duration is absorbed by the melanin of the hair and offers proven permanent removal of unnecessary hair growth without damaging the skin.

The high-energy 1064-nm Nd: YAG is the safest wavelength for permanent removal of unnecessary hair on very dark skin types and sun-tanned skin.

Elite IQ Cynosure produces high energy flow ensuring deeper penetration, faster healing sessions and optimal results.

Skintel

The only melanin reader in the industry

- Measures melanin content live to better guide treatment test site settings
- Finds a subjective indication of melanin that corresponds to the original skin
- Provides valid results

Facts!

- It treats unwanted hair growth radically and effectively, with immediate results from the very first session.
- It requires the minimum number of sessions and achieves a reduction of hair growth up to 50% from the third session.
- Improves skin texture.
- It does not cause irritation or injury and does not cause bursitis
- It concerns every skin type & every area of the body.
- It is applied in summer, even on tanned skin.
- It is applied exclusively by certified medical staff.

Spectacular Results
