

Ecopeel - Diamond Abrasion with Diamond

The ecopeel is the ultimate device for regeneration and removal of dead skin cells. Applying ecopeel with diamond or crystal heads helps the skin to produce only collagen and elastin, ie to regenerate.

Ecopeel gives excellent results without cravings at home, without redness and discoloration. In combination with other -non-invasive- treatments and within the framework of special protocols, it can achieve the complete reconstruction of the skin at all levels.

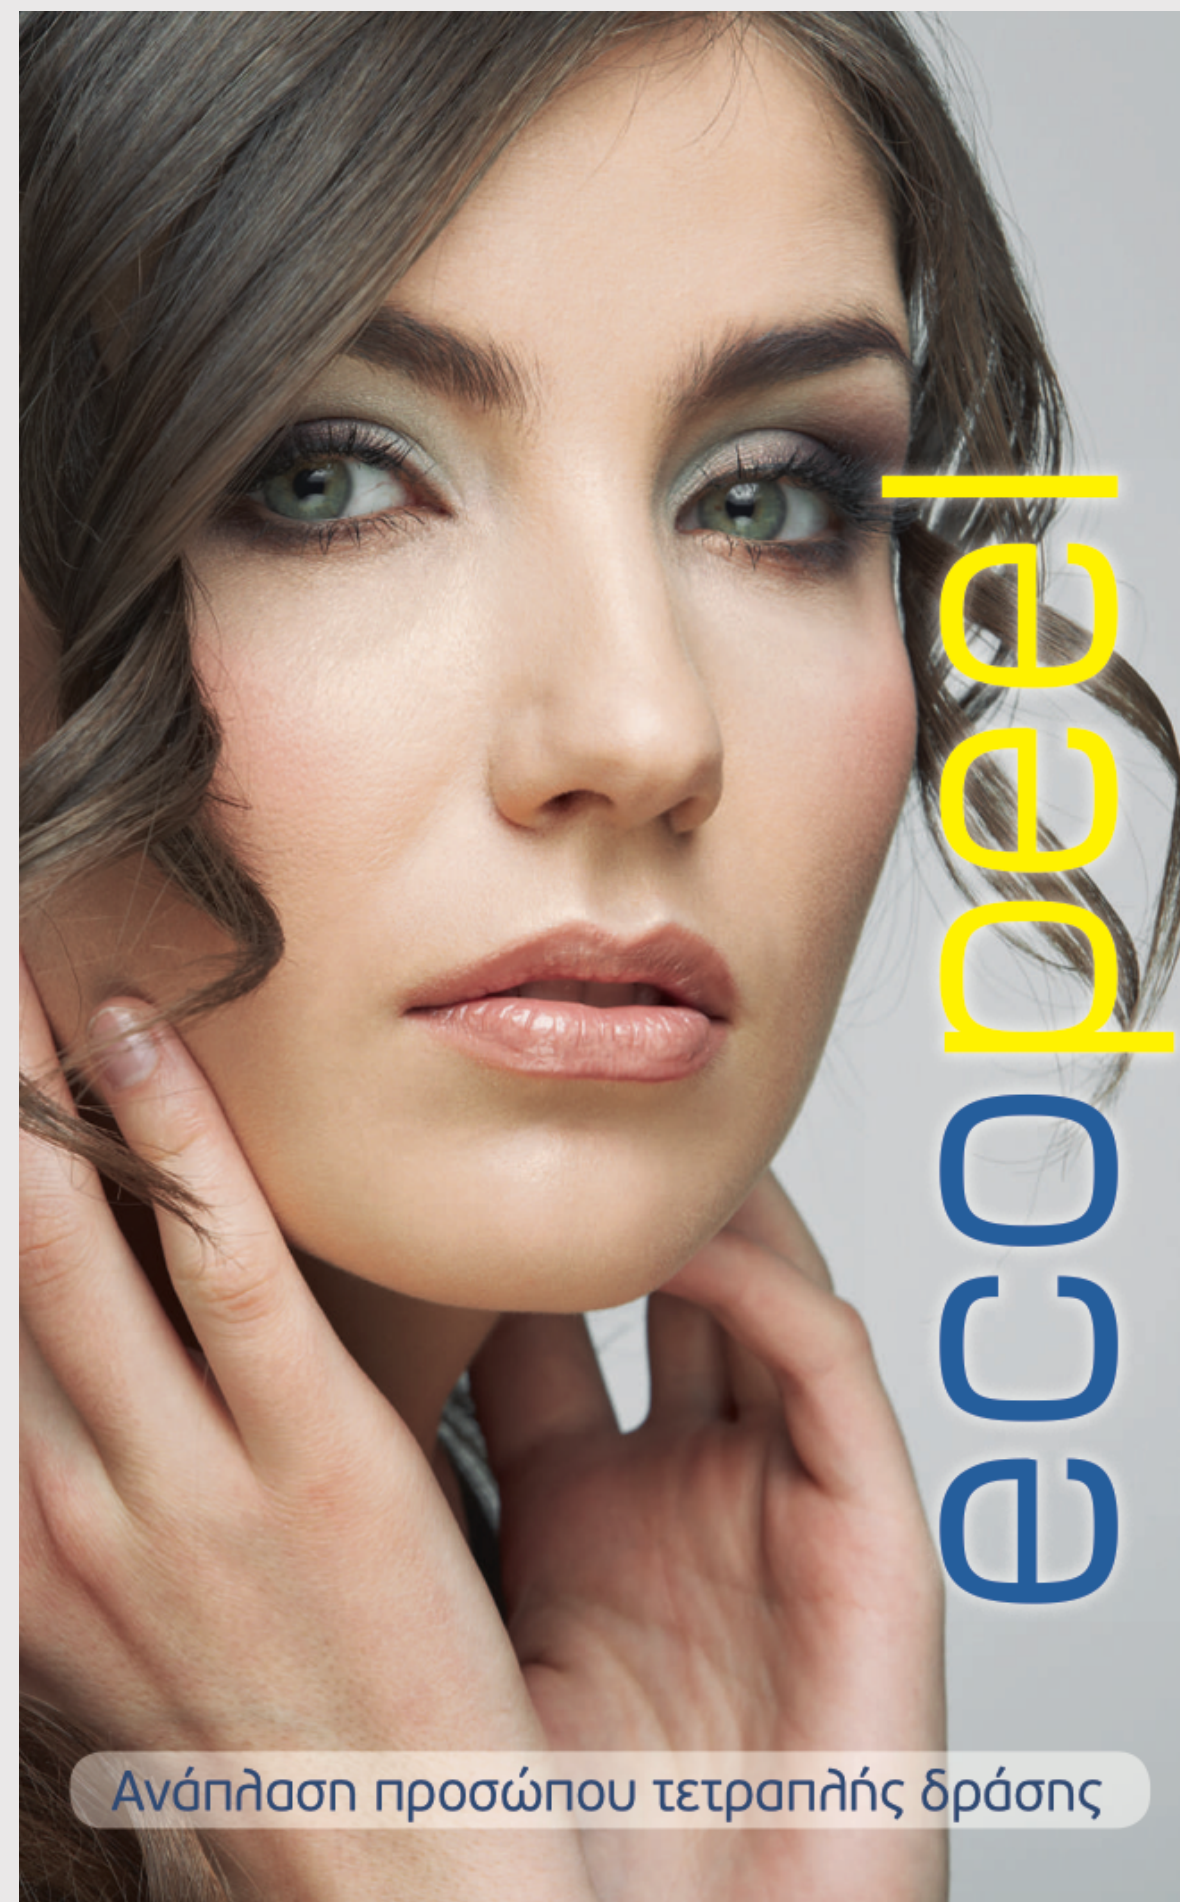

Immediate & Permanent results

From the first session you will immediately notice the softness of the skin. The next day the face is bright and firm and the skin smooth and radiant having been decongested from the dead cells.

After up to 6-7 repetitive sessions (1 session per week) -depending on the needs of the skin- the clinical result becomes permanent.

After each session there is a mild to moderate irritation, which with the use of appropriate dermocosmetic products and personalized aesthetic protocols does not last more than 10-15 minutes.

Diamond / crystal abrasion is the basis for skin rejuvenation and the first step to further improving the face.
